

Double Length Infeed

WOOD SEGMENT SOLUTIONS

Application

Double Infeeds are long machines that scan/optimize and position the log prior to the sawing process.

The machine has up to (30) hold down rolls in a row, each applying pressure on top of the log to assure it does not move

Customer Benefits

- High Flow valving allows for more logs/shift
- Fast Response times reduces log spacing
- Plug-in style valves reduce maintenance downtime
- 4 way pilots, means more consistant shifting times

Solution

93 Series, 1/2" ports

Cost Savings

Savings realized in increased production.
